## Cambridge Broadband is the “Envy of Wall Street” .... again

**Cambridge, UK, 17 October 2001:** Cambridge Broadband Ltd, pioneer of broadband fixed wireless access solutions, has been nominated to the Wall Street Journal’s “VC Envy Portfolio” for the second quarter in a row. The Envy Portfolio is created every three months by asking a panel of leading venture capitalists to name two European-based, venture-backed companies they believe have the brightest future and would love to invest in.

The list for this quarter focuses heavily on network infrastructure technologies and components, in the Wall Street Journal’s own commentary “nuts and bolts technology that actually makes things work”. Peter Wharton, CEO of Cambridge Broadband, feels that this reflects the maturity of the infrastructure market and the concern of venture capitalists to invest conservatively. “At Cambridge Broadband”, he said, “we have developed a sound business case for the deployment of our technology and this has brought us significant funding in the last six months.”

“We are delighted that Cambridge Broadband is winning consistent recognition in such a prestigious publication and we thank the investor community for their vote of confidence. Following our recent investment from Japan-based Yasuda Enterprise Development the outlook for Cambridge Broadband is excellent.” he concluded.

Cambridge Broadband's flagship product, the VectaStar 3500 is the most advanced combination of high bandwidth, high coverage and extended range currently available. It supports multiple carrier-class services simultaneously, each with robust QoS and has a 480 Mbps base station capacity that can deliver up to 60Mbps full-duplex per customer. The VectaStar has excellent non-line-of-sight capability and self-backhaul at a range of up to 20 km, making it a compelling solution for emergent network operators looking to enhance their business case.

### **About Cambridge Broadband**

Cambridge Broadband has pioneered the development of carrier-class, point-to-multipoint broadband wireless access equipment for network operators wishing to deploy high-capacity, multi-service networks. The company is focused on delivering high quality multi-service networks with the best price-performance in the 3.5GHz band for license holders worldwide. Cambridge Broadband was founded in January 2000 by an experienced team with a strong record of successful innovation in broadband wireless equipment.
